

# Rollers for Metal Processing

Your Rollers for Metal Processing from RotaDyne are built for durability. Engineered for the harsh process environment of high-temperatures, solvents, acids, bases, and abrasives, you will enjoy increased service life and lower maintenance. Complexities associated with Rolling, Pickling, Annealing, Tempering, Leveling, Galvanizing, Tin Plating, and Slitting are simplified with our innovative technology.

## RotaDyne Responds to the Precise Requirements of Metal Processors

Our Reliable Rollers will:

- Improve Your Throughput
- Increase Your Efficiency
- Enhance Your Production Quality
- Maximize Your Profitability

We offer:

- Engineering and Design
- Custom and Proprietary Formulations
- Confirmation of Chemical Compatibility
- Solutions to Unique Requirements
- Pickup and Delivery
- Rapid Shipment of the Right Roller

Our fundamental goal is to strengthen your manufacturing capacity.

# RotaDyne maintains the entire suite of Roller Technology

Your essential needs require Intelligence, Experience and Flexibility.

## SCALE

One of the largest manufacturers of rollers, roll coverings, and related products in the world.

## CONTROL

We operate every phase of roller manufacturing from cores to covers, including custom in-house rubber and urethane production, as well as design, engineering, and quality control, all under the RotaDyne umbrella.

## INNOVATION

Our industrious and tireless research and development department continuously brings new rubber and urethane elastomers to market.

## RELIABILITY

Each product passes the rigorous standards of our quality assurance team, meticulously testing each phase of production.

## QUALITY

ISO 9001:2008 Certification represents our company-wide commitment to environmental stewardship, health, and safety.

RotaDyne serves the Metal Processing industry in North America from our manufacturing plants in:

- Leola, Pennsylvania, USA
- Mississauga, Ontario, Canada
- Romeoville, Illinois, USA

We serve Europe and Asia through our partnerships with Mitex® in Germany, and Katsura Roller Mfg. Co., Ltd. in Japan.

### Core Manufacturing

Our Core Manufacturing combines roller technology expertise and masterful manufacturing techniques — making our products of the highest quality. Our rollers and sleeves will hold up over time withstanding continual wear and tear, and will repeatedly return your investment.

Materials include: Carbon Steel, Alloy Steel, Stainless Steel, Aluminum, Carbon Fiber, Composites, and Specialty Metals.

### Rubber and Polyurethane Manufacturing

Rubber and Polyurethane Manufacturing is the heart of our business, evolving over the decades to now encompass an inventory of over 5,000 engineered formulations. Vigorous chemical research into new and emerging applications continues unabated.

Our Rubber Manufacturing is comprised of the entire family of 17 elastomers, including: Nitrile, Neoprene, Hypalon, EPDM, Viton, Silicone, HNBR, and Carboxylated Nitrile.

Our high-temperature-resistant Polyurethane Manufacturing includes: Polyether and Polyester.

### Roll Coverings

We manufacture a wide variety of roll coverings to directly meet the application of the roller. Equally important to the covering is how it is affixed to the core. Our extensive experience in all types of roll coverings and state-of-the-art adhesion methods ensure that the roller covering and the core operate at maximum efficiency.
